CLAIMS AS AMENDED WITHOUT MARKUPS

1-17, 20-22, and 32-35. (Cancelled).

25-31. (Withdrawn)

18. (Currently Amended) A method for treating <u>heart failure</u> associated with the loss of cardiac muscle contractility comprising:

delivering an expression construct to myocytes therein, wherein the expression construct provides an expressible polynucleotide encoding a phospholamban molecule having a single point mutation consisting of S16E or a double point mutation consisting of K3ER14E, wherein expression of the polynucleotide accelerates SERCA2 mediated calcium ion transport in the treated myocytes to improve cardiac muscle contractility.

- 19. (Previously Presented) The method according to claim 18, wherein the expression construct is a viral vector.
- 23. (Currently Amended) The method according to claim 18, wherein the effect of the mutation is to diminish phospholamban inhibition of SERCA2 activity.
- 24. (Previously Presented) The method according to claim 19, wherein the viral vector is a DNA vector.
